

2. Revenue

Our recent 13-day marketing campaign provided clear indicators of early traction for Baseer. During this period, the landing page attracted 412 unique visitors and generated 63 new registrations, resulting in a 14.8% conversion rate, or approximately one registration for every seven visitors. Across social platforms, the campaign achieved 115 new followers on Twitter (X), 76 new followers on Instagram, and additional engagement through WhatsApp referrals, while LinkedIn experienced a technical issue that required creating a new account, slightly limiting its growth.

Additionally, the acquisition of 63 new users in 13 days reflects a strong early performance. Given the upward trend in engagement and cross-channel referrals, a slight increase in the monthly acquisition rate is expected, leading to an estimated 160 new users per month and approximately 2,000 users per year. Since Baseer operates on a subscription-based model with a one-month free trial, and using the internal conversion target of 25%, this corresponds to an estimated 500 paying subscribers during the first operational year.

In addition, data from the Capital Market Authority (CMA) [19] reveal the presence of more than 5.8 million retail investors in Saudi Arabia. Capturing even a small fraction of this market over the coming years reinforces the platform’s revenue potential and validates the scalability of Baseer’s model.

These indicators will play a crucial role in shaping our revenue expectations. In the following section, we outline Baseer’s primary revenue source.

2.1 Revenue Sources

2.1.1 Subscription

Baseer generates revenue exclusively through a subscription-based model that provides users with access to AI-powered investment tools and analytics. Subscriptions represent the platform’s only income source at this stage, offered through three tiers that vary in duration and pricing, as summarized in Table 3.

Duration	Cost
1 Month (Free Trial)	Free for 1 month

Monthly Plan	60 SAR / month
Annual Plan	500 SAR / year

Table 3: Subscriptions Costs

2.2. First Year Revenue

To estimate Baseer's first-year revenue, we rely on the projected number of paid subscribers derived from the updated annualized user acquisition rate. Based on the accelerated momentum observed during the 13-day marketing campaign, Baseer is expected to acquire approximately **2,000 new users** during its first operational year.

With the platform's 1-month free trial, only a portion of users will upgrade to paid plans. Using the internal conversion target of **25%**, Baseer is projected to have **500 paid subscribers** during the first year.

To estimate subscription revenue, we adopt the following distribution, aligned with Baseer's objective of increasing long-term user commitment:

- **40% subscribe to the Monthly Plan** (represents users who prefer short-term flexibility)
- **60% subscribe to the Annual Plan** (supports the platform's strategy of maximizing long-term subscriptions)

Table 4 summarizes the projected first-year revenue.

Duration	Cost	Number of Subscribers	First Year Revenue
Monthly Plan	60 SAR / month	200 subscribers	144,000 SAR
Annual Plan	500 SAR / year	300 subscribers	150,000 SAR
Total			294,000SAR
